MONITORING OF SYSTEM STATUS**

Overview

With a new regulatory framework allocating 4,700 MW of connection capacity for storage projects, Greece aims to reduce renewable energy curtailment and ensure grid stability. However, the solar sector warns that at least 8 GW of storage will be needed to prevent significant. The NPEC set the following key targets: (a) full decarbonisation by 2028, based on a detailed schedule introduced later on (this target has been temporarily suspended in light of the recent energy crisis); (b) power from RES to become the country's main energy source, reaching 65% of power. 'energy storage facility' means, in the electricity system, a facility where energy storage occurs. Electricity storage: the postponement of the final use of electricity at a time subsequent to its production, with converting it into a form of energy that can be stored, the storage of said energy. Even though electricity storage is recognized as a prerequisite for the decarbonization of the power sector, the development of storage facilities is still facing legal/regulatory barriers and investment feasibility concerns. This article focuses on standalone batteries. Greece. Greece has been actively focusing on energy storage since the emergence of the RES “boom” in 2020.
