Overview

The new solar and storage project will help solve Guinea-Bissau's energy crisis by providing clean and reliable electricity to millions of people who previously had no access to it. It will also contribute to reducing greenhouse gas emissions by displacing fossil fuel-based. The OMVG transmission network has increased Guinea's electricity trade capacity to 340,000 KVA, up from zero in 2015, surpassing the original project target and enabling reliable cross-border energy exchange. Guinea's hydropower plants (Kaleta and Souapiti) now supply clean energy domestically and. However, Guinea-Bissau has the power to improve both its economy and country with renewable energy. Energy poverty in Guinea-Bissau is very high. Serious challenges faced include: (i) discrepancies between supply and demand; (ii) waste resulting from obsolete distribution networks, with a loss rate of almost 47%; (iii) low investments; (iv) the. Guinea-Bissau is a small, cashew-rich country located on the west coast of Africa. It has a population of approximately 2 million people and is one of the poorest countries in the world.
