

Half of the photovoltaic panel is horizontal

ESS

Overview

Therefore, even though arranging solar panels horizontally might seem like it makes more shade, it actually blocks less sunlight and produces more power compared to the vertical setup. The two most common orientations are: 1. Vertical (Portrait) Orientation: The longer side of the panel runs up and down. 5 FEET TOP TO BOTTOM AND 40 FEET LONG. The difference is a slight technical one, mostly for ground mount and. In residential and commercial photovoltaic projects, the orientation of PV modules is far more than a simple installation choice — it affects system efficiency, drainage performance, aesthetics, and maintenance requirements. As photovoltaic systems become more diverse and decentralised, rooftops. There are two ways of arranging solar modules in photovoltaic power stations, horizontal and vertical.
