

Photovoltaic panels connected in series steps

Overview

Wiring solar panels in series requires connecting the positive terminal of a module to the negative of the next one, increasing the voltage. To do this, follow the next steps: Connect the female MC4 plug (negative) to the male MC4 plug (positive). This configuration is essential for grid-tied systems, long cable runs, and applications. In this article, we'll take a close look at a latter type: here is a short step-by-step guide on how to connect solar panels in series.
