

# Profits of energy storage system OEM production line

## Overview

---

The revenue potential of energy storage is often undervalued. Investors could adjust their evaluation approach to get a true estimate—improving profitability and supporting sustainability goals. Battery Energy Storage System (BESS) represents a power grid technology that stores electricity to enhance electric power grid reliability while increasing operational efficiency. BESS permits battery recharging during periods of low demand or extra grid supply capacity. As the global build-out of renewable energy sources continues at pace, grids are seeing unprecedented. Net present value (NPV) is the current worth of a future sum of money or stream of cash flows given a specified rate of return. It is a great tool to analyse the profitability of an investment independent of different lifetimes and account for inflation and degradation - two of the biggest impacts. Lithium-ion OEM LG Energy Solution will slow its expansion to focus on increasing utilisation at existing production lines, while also starting battery production in the US for energy storage next year, it revealed in its quarterly results.
