Overview

The Dye-sensitized solar cells(DSSC) solar cell/supercapacitor integrated device achieves efficient energy conversion and storage by combining DSSC with supercapacitor. The device operates through three main processes: photoelectric conversion,electrochemical. Storage helps solar contribute to the electricity supply even when the sun isn't shining. It can also help smooth out variations in how solar energy flows on the grid. First, it. Integrated solar energy storage and charging power station is gradually being promoted and applied because of their energy-saving, environmental protection, and excellent economic characteristics. In grid connected mode of operation current injection control or power injection is required to control whereas in islanded mode of.
