At the country level, the top five markets for new installations in 2024 were China, the US, Germany, India, and Brazil -- together accounting for 81% of global additions.

Global Wind Power Growth Accelerates in the First Half of 2025. The report can here be downloaded in pdf format.

The global wind energy market plays a vital role in the transition to clean and sustainable power generation. By harnessing wind through turbines, it offers a renewable, low-carbon alternative to ...

The wind energy sector in 2025 will continue on a growth trajectory, with technological innovations, offshore wind expansion, and advancements in digitalization and storage.

Modern wind turbines can generate electricity at wind speeds as low as six to nine miles per hour. This is known as the cut-in speed. If wind speeds exceed 55 miles per hour, the turbines shut off to ...

By April 2025, clean electricity sources, including wind and solar, were projected to surpass 51% of total utility-scale electricity generation in the U.S., building on a 25.5% renewable share seen in recent ...

This report analyses changes in global electricity generation from January to June 2025 compared with the same period last year to measure the progress of the global clean energy transition.

The top wind energy projects supporting the energy transition include companies like China Longyuan Power, SSE Renewables, Equinor, Ørsted and Enercon

Meta Description: Discover the 2025 global wind power rankings and learn why China, the US, and Germany dominate. Explore policy drivers, technological breakthroughs, and regional ...

2025 Top Five Power Generation Wind Power

China remains the largest market, accounting for 72% of global additions in the first half of 2025 with 51.4 GW installed. Other countries adding more than 1 GW included India (3.5 GW), the ...

Modern wind turbines can generate electricity at wind speeds as low ...
