As a leading enterprise in the domestic infrastructure and energy fields, China Aneng Group has successfully won the project with its core advantages in large-scale engineering ...

China has more utility-scale solar than any other country. The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility ...

China achieved a new milestone in its energy transition, with wind and solar power together generating a quarter (26%) of the country's electricity in April 2025, the highest monthly ...

China is set to see solar capacity overtake coal for the first time this year, with wind and solar expected to make up about half of total installed power capacity by end-2026.

The 400 MW photovoltaic project bid that China Aneng Third Bureau won in Hotan will see the company build three projects - Celle 50 MW, Moyu 150 MW, and Luopu 200 MW photovoltaic ...

China power statistics - April 2025 In the first fourth months of the year, wind and solar power generation capacity accounted for 89% of new capacity (see Figure 1 below). Solar continued to show significant ...

China's solar generating capacity is expected to surpass coal for the first time this year, according to the country's top electricity industry group, marking a milestone in the country's ...

China's installations of wind and solar in May are enough to generate as much electricity as Poland, as the world's second-biggest economy breaks further records with its rapid buildup of...

China's installed solar power capacity is set to surpass coal for the first time in 2026.

In 2020, China saw an increase in annual solar energy installations with 48.4 GW of solar energy capacity being added, accounting for 3.5% of China's energy capacity that year. 2020 is currently the ...
