Since the invention of the modern wind turbine generator (WTG) in 1891, China has recognized that wind energy technology offers an effective way to provide electricity to rural and isolated areas.

China's 1.4 TW operating solar and wind outstrips thermal power In Q1 2025, China's wind and solar capacity surpassed its thermal (coal and gas) capacity for the first time, supplying nearly 23% of the ...

(Yicai) Dec. 16 -- China will add more than 200 million kilowatts of new wind and photovoltaic power generation capacity next year as it accelerates the green and low-carbon transformation of its energy ...

China switches on world's first 20MW wind turbine to feed power into the grid The wind turbine can generate enough electricity to power 44,000 homes each year.

In southern China's Guangdong province, a new skyline is taking shape away from its shores: hundreds of wind turbines have been installed in the South China Sea to generate renewable...

China's wind power generation stems from several large wind installations across the country. Some areas, especially Inner Mongolia in the north and Xinjiang in the west, host some of the...

Wind power could soon come from the sky as China has successfully tested a megawatt-class airborne turbine that generates electricity while hovering 2000 metres up.

As a matter of fact, this chart below provided by the EIA shows that 16% of all electric generation in China comes from wind.

BEIJING | Xinhua | The world's most powerful offshore wind turbine has begun feeding electricity into the grid off the coast of southeast China, marking a major technological leap in the ...

China Electric Power Generator Wind Power

With its large land mass and long coastline, China has exceptional wind power resources: [3] Wind power remained China's third-largest source of electricity at the end of 2021, accounting for 7.5% of ...
