When discharging air vertically, because the generator is surrounded on all sides, can result in higher than ambient air temperatures being pushed into inlet vents.

Air entering the inlet section of the gas generator is directed into the axial compressor by the inlet casing, and then compressed to a ratio of 19:1 (nominal rating at ISO conditions).

In most cases, the diesel generator set is installed in the generator room for use. During the design process of the engine room, the air inlet and air outlet must be unblocked to ensure the air ...

In this white paper, CFD has been utilized to look at the influences of walls near generator enclosures as well as the influence of prevailing winds.

The location of the heater and plumbing connections shall ensure a continuous up-ward flow from the cold coolant inlet of the heater to the heated coolant return in the engine block to avoid air pockets.

The installer must make sure that the total square inches of free air inlet opening is sufficient to limit the heat rise in the room to prevent the room temperature from exceeding the generator 's operating ...

If the generator manufacturer installation requirements do not specify the wind resistance of the installation/anchoring method, a State of Florida licensed engineer will be required to certify that the ...

Position the generator set so that the prevailing wind do not enter into the radiator / exhaust outlet. If this is not possible, install a wind barrier. Distance of the wind barrier from the room should be atleast ...
