-----  
What is a power generator fire suppression system?

Using a range of extinguishing agents, our power generator fire suppression systems protect wind turbines and renewable energy assets across the globe.

Do you need a fire suppression system for a genset?

Operators and owners need a compact, durable fire suppression system for gensets or generator set fire suppression that quickly detects and suppresses fire, complies with regulation and keeps employees and environment front of mind.

What is a constant load generator?

Constant load generators are often left to operate independently of any supervision. They are usually sited close to other assets including buildings and areas occupied by people. However, with a Reacton automatic fire suppression system fitted we provide a 24/7, 365, day and night detect and defeat fire suppression system for any generator size.

What is a genset fire suppression system?

It is a low-profile fire suppression system that is simple to install. A Stat-X system will typically detect and suppress the fire before it causes significant damage to the equipment and an interruption to your business. Gensets provide electrical energy to developing areas and locations that are not connected to the power grid.
