In mid-March, a hailstorm outside of Houston crippled an enormous solar plant, breaking panels and leaving local residents concerned about metals leaking into water supplies. Solar panels ...

Solar panels are designed to be quite resilient to environmental factors and can still generate energy even when damaged. Studies from the National Renewable Energy Laboratory ...

On March 15th, a hailstorm destroyed thousands of solar panels on a solar farm in Texas, leaving shards of glass throughout the land and the possibility of chemicals leaking into the ...

Communities worldwide rely on solar farms for their power needs. There is now enough experience and data for an in-depth analysis of risk and ...

Communities worldwide rely on solar farms for their power needs. There is now enough experience and data for an in-depth analysis of risk and solar panel vulnerabilities.

An onslaught of hail in southeastern Texas that destroyed large portions of a massive solar farm is highlighting the perils of trading traditional power sources for vulnerable "green"...

Thousands of panels on a solar farm southwest of Houston, Texas, were damaged by a powerful hailstorm on March 15.

When solar panels, which typically have a 25-30 year lifespan, reach the end of their lives and become waste, they must be managed safely. Learn about this renewable energy waste, ...

A massive solar farm of two million panels in the Mojave Desert is heading for dormancy just 11 years after going into operation. The Ivanpah installation was once the largest project of its ...

Destroyed solar panels for power generation

Recent destruction of solar cells at the Fighting Jays Solar Farm in Texas has sparked concerns amongst locals about potential land contamination and drawn attention to reliability gaps in ...

A powerful EF-2 tornado struck Duke Energy's Lake Placid Solar Power Plant during Hurricane Milton, causing severe solar panels destroyed in florida. Winds up to 135 mph ripped through the facility, ...
