Castle Energy delivers smart, efficient ducted wind turbines for homes, farms, and businesses. Embrace renewable energy with innovative wind technology.

DWT's wind turbine produces 50% more energy than a conventional turbine with the same rotor size. Our focus is to provide the lowest cost per kWh in the small turbine market, reducing the time for ...

Ducted wind turbines (DWTs) have emerged as a promising enhancement to traditional horizontal axis wind turbines, demonstrating ...

Based on an experimental test rig tested at The University of Waterloo and supported by NEXUS-NY, he and Paul Pavone formed the company Ducted Turbines International, now transitioned to Ducted ...

Many attempts have been made to build a viable unit and all have failed commercially. Ducted Wind Turbines, Inc. has exclusively licensed the patented technology from Clarkson University that enable ...

Energy is what's important, not the power rating of a turbine at 11 m/s. We are currently focused on our Gen 3 unit, a commercial prototype in the ~4000 kWh/year range, based on an average Rayleigh ...

Integration of small distributed wind into the commercial sector provides a resilient, redundant option to a large single source turbine. It's not just about "going green".

There you can find photos of Ducted Wind Turbines (DAWTs). While ducted or shrouded wind turbines and Vertical Axis Wind Turbines can be of any size, they ...

Ducted wind turbines are a type of wind turbine that features a duct or shroud around the rotor blades. This design is intended to improve the efficiency and performance of the wind turbine by ...

Over the recent decades to augment efficiency of wind turbines many different Ducted Wind Turbines

# Ducted wind turbine

(DWTs) have been designed. The ducted ...

Ducted wind turbines are a type of wind energy device that incorporates a duct or shroud around the rotor blades. Unlike traditional wind ...

It is important to understand the differences when considering a wind turbine system. Turbines are typically described or rated with a certain power value, however it is the energy they generate over ...

DWT has installed several turbines in Upstate New York and has also shipped a unit to the UK. Below are some highlights of recent installs which illustrate the flexibility to serve customer needs, whether ...

The passion to change people's quality of life is what drives us. Whether it's helping a farmer offset their carbon footprint, emergency crisis relief or bringing electricity to places in the world that have never ...

Motivation Ducted turbines can produce more power per area than non-ducted designs Optimal design depends on performance metric Power per rotor area, &quot;4 Power per total cross sectional area, ...

Ducted Wind Turbines (DWTs) have been developed to improve wind turbine performance throughout the past few decades. The enclosed wind turbine exceeded the open rotor by a slight ...
