In the microgrid, the capacity expansion planning is initiated to expand the capacity of battery, wind turbine, solar and micro turbine energy storage system. We have elaborated a 6-year ...

This paper presents an advanced model for dynamic and multi-stage capacity expansion planning in the microgrid integrated with electric vehicle charging station and various energy resources.

To address the dual overload issues of bidirectional power flows in distribution transformers and lines caused by high photovoltaic (PV) penetration in distribution networks, this paper proposes a dynamic ...

This paper proposes a novel capacity expansion framework for electric vehicle charging stations (EVCSs) through short-term functional decisions and long-term planning under stochastic power ...

Subsequently, it offers a systematic review of planning methodologies for multi-type energy storage, covering traditional application scenarios such as source-side, grid-side, and load-side.

To address these challenges, this paper proposes an operational and planning strategy for hydrogen energy storage in distribution networks under dynamic transformer capacity expansion ...

Here we conduct an extensive review of literature on the representation of energy storage in capacity expansion modelling.

In order to solve the problem of long time and high capital investment caused by the traditional method of power capacity increase on the user side, this paper proposes a solution of ...

With increasing reliance on variable renewable energy resources, energy storage is likely to play a critical accompanying role to help balance generation and consumption patterns.

Dynamic capacity expansion of energy storage devices

In our improved storage CV approach, we update the storage CV between each of the two-year solve periods to allow for the declining value of storage capacity with greater storage deployment, as well ...
