Does Brazil have a national electromobility law?

Brazil does not yet have a national electromobility law, but its position as South America's largest automotive market and the rising number of electric vehicles are driving major regulatory changes. At all government levels--federal, state, and municipal--proposals are emerging to support this energy transition.

Will electric cars be exempt from quotas and rates in Brazil?

Notably, domestically produced electric and hybrid vehicles will be exempt from these quotas and rates. This policy change is expected to significantly impact the automotive market in Brazil. Currently, only a few companies, such as BYD, GWM, Stellantis, and Toyota, have plans to produce electrified vehicles locally starting in 2024.

What does Brazil's new electric vehicle tax policy mean for importers?

The Brazilian government's new policy on electric vehicle taxation marks a significant shift towards encouraging local production. While it poses challenges for importers, it also offers opportunities for growth within the domestic market.

What is the electric vehicle industry like in Brazil?

The electric vehicle industry in Brazil is in a period of growth and transformation, and promises to heat up even more with government incentives and the arrival of investments and new assemblers in the country.
