The Birmingham Centre for Energy Storage (BCES) brings together research expertise from across the University to identify and address key energy storage challenges and their solutions.

This post investigates the state of the UK battery storage pipeline, year-to-date figures and an insight into the appetite to develop over time. Battery storage is essential for providing the ...

Discover the evolving policies and regulations of the European Union and United Kingdom, with both issuing landmark legislation in the energy storage.

Long Duration Energy Storage (LDES) systems will play a fundamental role in decarbonising Great Britain's energy system, as they provide flexible and reliable capacity while ...

We aim to ensure effective and efficient use of the significant investments in research infrastructure for energy storage. We will also ensure that data generated is curated, accessible and ...

Several projects are currently under development and with some expected to be operational by 2030, and the introduction of an investment support scheme will help deliver them.

Long-duration energy storage technologies store excess power for long periods to even out the supply. In March 2024, the House of Lords Science and Technology Committee said ...

Major developers of UK energy storage projects include EDF, Pivot Power, Statera, and RES, with each company active in several power supply and flexibility markets, providing services to ...

See the achievements and progress the Faraday institution has made for the UK in energy storage research, commercialisation, market analysis & skills development.

Energy storage will be an important component of future energy systems. The aim of this roadmap is to assess its role in the UK's transition to net-zero, and to identify the contribution of research and ...
