This research comprehensively analyzed renewable energy integration in Eritrea, using extensive historical data. By exploring residential PV in the LV network and wind energy in the HV ...

This study explores strategies for maximizing direct renewable energy consumption by incorporating residential photovoltaic (PV) and wind energy into Eritrea's electricity grid.

The construction of the information management concept of inspection report is realized, and a set of solutions that can be implemented on the ground is provided to improve the efficiency of base station ...

The suitable energy saving strategy combined with different energy saving functions, including an initial relative threshold to the scenario and executable energy saving time schedule, will be enabled for ...

Eritrea heavily relies on imported fossil fuels, particularly diesel, making its energy supply vulnerable to fluctuations in global oil prices. The national electricity network is limited, predominantly consisting of ...

Recognizing this, Mobile Network Operators are actively prioritizing EE for both network maintenance and environmental stewardship in future cellular networks. The paper aims to provide an outline of ...

Since Eritrea does not have hydro potential, all of its generation is oil-based. The excess capacity was caused by the lower than expected demand growth resulting from the war and from inadequate ...

Distributed energy storage method plays a major role in preventing power fluctuation and power quality problems caused by these systems in the grid. The main point of application is dimensioning the ...

To further explore the energy-saving potential of 5 G base stations, this paper proposes an energy-saving operation model for 5 G base stations that incorporates communication caching ...

In this paper, we design an electric-cellular collaborative network (ECCN) and formulate a joint optimization problem to minimize electric supply and QoS degradation costs, subjecting to EN's ...
