Europe's solar sector has maintained its impressive momentum into 2025, with new data confirming record-breaking installation figures across the continent.

Solar is set to become the largest green energy source globally, the question now for Europe is whether it can revamp its grid fast enough to prevent another dramatic blackout.

Using a detailed computer model of the continent's future power grid, the researchers found that a system of space-based panels designed by Nasa could reduce the cost of the whole ...

About The European Electricity Review analyses full-year electricity generation and demand data for 2024 in all EU-27 countries to understand the region's progress in transitioning from ...

Wind and solar generated more EU electricity than fossil fuels for the first time in 2025, marking a "major milestone" in the transition to clean power. A new report from energy think tank...

This analysis profiles the top 10 solar companies shaping Europe's sustainable energy future through technological innovation, large-scale project deployment, and cutting-edge solar mounting solutions. ...

The European solar market slows to 65.5 GW of new installations in 2024, marking just a 4% growth compared to 2023. Explore the challenges and future outlook for solar energy in Europe ...

Under the European Green Deal and the REPowerEU plan, solar power is a building block of the EU's transition to cleaner energy. Its accelerated deployment contributes to reducing the EU's ...

EU Solar Output Tops 340 TWh in 2025, Lifting Renewables to Nearly Half of Power Mix Renewables accounted for close to half of electricity generation in the European Union (EU) in 2025, ...
