Can France build offshore wind power?

Despite its considerable potential, France has been very slow in building offshore wind power, lagging far behind its North Sea neighbours. The main hurdles have been lengthy administrative procedures, legal challenges and local stakeholder opposition. Since 2022, France has started to catch up by commissioning its first offshore wind parks.

Does France have a permit system for offshore wind?

The French permit system for offshore wind is long and bureaucratic, involving multiple layers of approval from various government agencies. This has caused significant delays in project implementation. For example, France launched its first offshore wind tender in 2011, but as of 2021, not a single turbine was operational.

How much wind power does France need?

As Figure 1 shows, France has a very low share (11%) of its electricity demand covered by wind power; offshore wind is just 1%. That places France far below its Northwest European neighbours.

Are onshore wind turbines legal in France?

Paris, March 9, 2024 - In a landmark decision, the French Council of State has ruled that authorizations for onshore wind turbines and rules for the renewal of wind farms are illegal. The decision comes after a legal challenge brought by the Fédération Française pour l'Environnement Durable and 15 associations.

Source: Eoliennes en mer en France 7 France: Spotlight on calls for offshore tenders France has made significant strides in the offshore wind industry, from three rounds of call for ...

KEY TELECOMMUNICATIONS LAWS, REGULATIONS AND POLICIES All primary legislation governing the telecommunications sector in France is codified into the CPEC.
