Vertical storage may break the cores and cause the films to warp over time. In the absence of ideal storage conditions, films can still survive for decades as long as they are kept in a ...

For long term storage, stack the films horizontally, rather than on edge, to minimize physical distortion. But don't stack them more than six or eight cans high because they're heavy and the bottom ones ...

Storage in metal lockers, provided the minimum required egress width is maintained. Explore a searchable database of US construction and building code. Code regulations are consolidated by ...

Films should be stored either on a suitable core or reel, with an adequate length of leader attached to the head and tail. The films' identification information should be permanently written on the leader.

In most areas you can only pay one or two years in advance. Of course it's easy to have some agent paying for you. Lockers like in bus stations are cleared out on a periodic basis. Rather ...

Motion picture films and especially the silver particles or color dyes that constitute the image are highly sensitive to inappropriate environmental conditions; good storage is arguably the best preservation ...

HD consulted with Preservation at Harvard to determine optimal storage conditions for motion picture film. Film should ideally be stored at slightly different conditions than video and paper for its long ...

As soon [long?] as it's not brought to the production, to me it would be fine. What is really not fine is: rotten shoes, dirty underwear, old socks with their own developed ecosystem, and some ...

A common thing in many movies is for something to be stored in a locker at a bus station or train station. ISTR at least a couple of movies where the Big Clue or the MacGuffin or whatever ...

How long can the cinema lockers be stored

A relative humidity (RH) of 20 to 50% is best for film storage, with a temperature that is as cold as possible. Use the free IPI Preservation Calculator to evaluate your current storage conditions.
