---

Data released by China's National Agency last week revealed that the country's solar electric power generation capacity grew by a staggering 55.2 percent in 2023. The numbers highlight ...

However, from all of the total energy produced by China in 2019, only 3.9% of that energy was produced by solar energy. This was lower than the percent energy production from solar power of the ...

Discover all statistics and data on Solar energy in China now on statista !

Photovoltaic (PV) technologies dominate China's solar industry, with roughly 99% of China's solar power capacity. Chinese PV manufacturing accounts for the vast majority of global PV production.

China Energy Production: Year to Date: Electricity: Solar data is updated monthly, averaging 24.670 kWh bn (Median) from Dec 2015 to Dec 2025, with 108 observations. The data reached an all-time ...

Between January and May, China added 198 GW of solar and 46 GW of wind, enough to generate as much electricity as Indonesia or Turkey.

In CY2024, China hit a new record of annual net new capacity added to the grid at 429GW, a 21% y-o-y increase. Of this, wind and solar power combined capacity accounted for 83% at 356.5GW, dwarfing ...

If trends hold, the country will make as much power from the sun each year as the United States makes from everything. Costs keep falling, tech keeps improving, and policies stay strong.

China was responsible for installing a massive 256 GW of that solar capacity. For context, it took until September last year to pass the 350 GW mark. This year, the milestone was achieved in...

China has more utility-scale solar than any other country. The 277 GW of utility-scale solar capacity installed

# How much solar energy does China generate each year

in China in 2024 alone is more than twice as much as the 121 GW of utility ...
