It is expected that, by 2050, more than 22% of the global energy demand can be supplied through the usage of green hydrogen, and Reykjavik can serve as a model for the rest of the world.

Nestled in the world's northernmost capital, the Reykjavik Energy Storage Project is rewriting the rules of sustainable energy. With Iceland already sourcing 85% of its energy from renewables like ...

Iceland has opened its first multi-energy station, where biomethane, fast electric vehicle battery charging and hydrogen refueling are all available under the same canopy, in the capital ...

Reykjavik Energy's (Orkuveitan) financial forecast for the years 2025 to 2029, which was approved by the board on October 28th, includes the company's ambition to be an ...

Summary: Explore how Reykjavik's innovative energy storage systems are transforming renewable energy reliability. This article dives into geothermal integration, grid stability solutions, and the latest ...

Our mission is to develop and deploy economically-viable, sustainable hydrogen infrastructure that will further the decarbonisation of Iceland and the world.

Can green Hydrogen be exported from the Arctic? Yes, we do already!!! How to assess the power potential? How much Hydrogen can be produced? We can calculate it! Is it logistically possible? Up ...

This article explores how modular energy storage containers provide flexible, scalable solutions - and what factors influence project quotations in this evolving market.

Qair is an independent renewable energy company developing, financing, building, and operating solar, wind, waste-to-energy, storage and green hydrogen production assets.

When calculating the gross final energy consumption, which is critical to measure whether the national
