-----

Could someone confirm this cause if that is the case the wind turbines would constantly need to be moved to produce any power, and using a lot of wind power would be out of the question.

But after a while playing on a server, the Wind Turbine stopped working. Wind comes and goes so I thought it as normal, but it's been like that for a couple days now (Real Life days).

Wind Turbine ? Industrial Craft 2 Tutorial ? English Dylan 4.38K subscribers Subscribed

Though Wind Speed wildly fluctuates, it can never be zero. The Wind Turbine2 is regarded as a mediocre Power source, as there are cheaper and more reliable options present such as Firebox and ...

The Wind Turbine is a machine added by IndustrialCraft 2 and is used to produce Energy Units (EU) through wind energy. The amount of Kinetic Units (kU) which is produced, depends on the wind ...

The Power output of all Wind Turbines is determined by the Wind Speed of the world (which is random) and the tier of the Wind Turbine. The Wind Speed can never be zero (it also applied on Wind ...

Basically there are 2 wind generators for IC2. The old windmill that was present before the introduction of rotors, and the kinetic wind generator (wind turbine) which takes a rotor that depletes over time to ...

Wind Turbines are creating 5MW but there is no electricity flow going to the transformers. Placing down new turbines and connecting them together, some stopped having power flow. ...

Wind Turbines are a renewable method of Power generation, being extremely simple to set up and operate. However, their Power yield greatly varies based upon Wind Speed, diminishing their viability ...

The production should only drop to 0 if there is nowhere for the power to go if there is possible bandwidth. There is no internal buffer too, so it is very much either working and producing ...
