What can Ireland do with renewable hydrogen?

Recognizing the transformative potential of renewable hydrogen, Ireland aims to harness its abundant wind energy resources to produce clean, zero-emission hydrogen that can decarbonize key sectors such as heavy transport, industry, and energy storage.

What is Ireland's 2023 National Hydrogen strategy?

Ireland's 2023 National Hydrogen Strategy outlines the country's vision for integrating renewable hydrogen into its energy system to support decarbonization, enhance energy security, and create industrial opportunities.

Could Ireland have a hydrogen future?

The potential for hydrogen in Ireland is an area of increased interest across the industry. As O'Grady explains: "The focus for offshore wind is, correctly, how it can deliver Ireland's energy security and independence. Beyond that, Ireland's significant and plentiful homegrown renewable energy potential could be used in other ways.

Could hydrogen be used in a power station?

This type of technology has the potential to complement the electrification-led decarbonisation of Ireland while maximising the use of our greatest natural occurring resource, renewable energy. "Hydrogen could be utilised in power stations, heavy goods vehicles, and, in the longer term, aviation and shipping.

This paper examines the opportunities and challenges associated with the development of a hydrogen economy to support decarbonisation in Ireland (in line with the RePowerEU communication, action ...

This type of technology has the potential to complement the electrification-led decarbonisation of Ireland while maximising the use of our greatest natural occurring resource, renewable energy. "Hydrogen ...

Paul McCormack, founding member of Hydrogen Ireland and leader of several international hydrogen projects including GenComm, H2AZEL and H2CAT, added that "The report clearly identifies that ...

Green Hydrogen Vision Ireland's vision for green hydrogen is deeply rooted in its commitment to achieving a

Ireland has several hydrogen energy stations with 100kWh

net-zero emissions future and fostering sustainable economic growth. Recognizing the transformative potential of ...

The Department of Transport in Ireland, and the Department for the Economy in Northern Ireland, today publish the Phase I and Phase II study reports as part of a Shared Island Initiative project to support ...

This paper investigates the feasibility of establishing an electricity-gas-hydrogen coupled energy system by modeling the HCNG network, power grid, and hydrogen electrolyzer in Ireland with consideration ...

IERC (2023), "Hydrogen in the Irish Energy Transition: Opportunities and Challenges", International Energy Research Centre (IERC), Ireland About IERC The International Energy Research Centre (IERC) at ...

The National Hydrogen Strategy sets out the strategic vision on the role that hydrogen will play in Ireland's energy system, looking to its long-term role as a key component of a zero-carbon economy, and ...

National Hydrogen Strategy The strategy is framed within the context of carbon neutrality by 2050, where hydrogen can be a substitute for fossil fuels in hard to decarbonise sectors where direct electrification ...

Plans for the introduction of a hydrogen fueling infrastructure in Ireland are accelerating, and a group representing those interested in using hydrogen as a fuel source projects that there will be 80 hydrogen filling ...
