Solar energy is leading the way, with much of the new development occurring on farmland and in rural communities. It has the potential to be a financial opportunity for landowners, yet it can ...

The program provides guaranteed loan financing and grant funding to agricultural producers and rural small businesses for renewable energy systems or to make energy efficiency improvements.

In the U.S., fossil fuel deposits are linked to land ownership, and many farmers have capitalized by selling their mineral rights to energy companies. Recent solar installations on farms ...

In this article, we'll offer a detailed analysis of solar farming's profitability, examining factors like technological advancements, government incentives, and market trends that influence its economic ...

As the demand for renewable energy continues to rise, the potential for profit in solar farming remains promising, encouraging more stakeholders to explore this green investment avenue.

In the end, the decision came down to the money. For many farmers, deciding to lease land to solar panels might be the difference between one day saving or selling their farms, Retter said.

If you are an agricultural land owner and are considering your options to go solar, here are some resources to help you decide what's best for you.

The vast majority of new solar facilities are being built in rural communities, where land is usually more plentiful than money, and the locals regularly struggle to pay the bills.

Co-ops distribute electricity to about 1 in 8 Americans, largely in rural or hard-to-reach areas. While their relatively small size in some ways makes them more nimble, their energy transition...

Is rural solar power generation really profitable

Maryland farmers fear that thousands of acres of Maryland farmland could soon be producing solar energy under a new law, rather than corn, wheat and soybeans -- potentially ...
