How does a balcony power station work?

A balcony power station basically works like a large solar power system by converting sunlight into electricity. This electricity flows via a cable from the inverter directly into your socket and supplies your electrical appliances.

How to install a solar inverter on a balcony?

Simply position or fix the solar modules on the balcony, connect them to the inverter and then connect it to a socket using a cable. If you choose a system with storage, this is simply connected in between.

What is a balcony power plant?

What's more, our balcony power plants not only provide energy, but also serve as a stylish and functional privacy screen. A balcony power plant, also known as a small photovoltaic system with a capacity of up to 800 watt peak or 0.8 kilowatt peak, is ideal for mounting on a balcony or terrace and aims to produce electricity for your own use.

Why should you choose a balcony power plant?

Balcony power plants not only offer the obvious benefit of saving energy and thereby reducing environmental impact, but also enable people with limited space or without access to their own roof to produce solar energy themselves.
