Do monopoly utilities have monopsony power?

This latter condition applies particularly to wind and solar power facilities. As a single exclusive buyer in a restrictive geographic market for new electricity resources, monopoly utilities thus have what is called monopsony power. Compared to studies of monopolies, economists have given less attention to monopsony buyers of primary resources.

What is a natural monopoly?

A "natural monopoly" is a service or product that gets cheaper as the market grows. Hempling says that the idea of a natural monopoly has changed dramatically in recent years and that many have lost sight of natural monopoly's place in energy markets. In the past it made sense to monopolize utility services, but does it make sense now?

How do monopoly utilities react to distributed energy opportunities?

Hempling explains that monopoly utilities fear the growing impact of distributed energy opportunities on their bottom line. In the face of direct challenges, monopolies react in one of three ways: Block everything by lobbying legislators or regulators under guise that new competition will hurt the consumer.

Will monopolies make the path to community energy more difficult?

Finally, some monopolies will play along, yet make the path to community energy more difficult by introducing insurmountable financial and logistical barriers. Farrell mentions the example of Xcel Energy's community solar program.

The notion that renewable energy is a level playing field, where companies can compete on price and efficiency, is a myth. The reality is that governments around the world are heavily ...

This figure illustrates three prototypical power market firms. Independent power producers develop and operate generation resources, and typically lack market power. Wires-only utilities ...

While these measures aim to increase Europe's energy sovereignty, another major aspect must be addressed: our industrial dependence in the photovoltaic sector. In fact, China today ...

Is there a monopoly on solar power generation

A "natural monopoly" is a service or product that gets cheaper as the market grows. Hempling says that the idea of a natural monopoly has changed dramatically in recent years and that ...

It is no secret that China has 80 percent monopoly on solar manufacturing industry. According to the International Energy Agency, this control has emerged as a threat to the huge ...

These utilities often have substantial market power over the generation market due to a monopoly on transmission services as well as the ability to exclude competitors from supplying ...

Explore the complexities of Monopoly with our comprehensive IB Economics activity. Designed for Higher Level students, this interactive case study of Island Energy Co. immerses ...

The flawed regulatory process that has enabled the decades-long trend of consolidation in the energy industry, and why it is at odds with the current trend toward decentralized, local, customer ...

This is an extract from a recent report "Progress in Diversifying the Global Solar PV Supply Chain" by The Renewable Energy Institute. Key Factors and Issues behind China's ...

China's industry ministry has warned companies making photovoltaics (PV) - panels for solar power - that serious problems in the sector show an "urgent need to deepen industry ...
