Design of Electronic communications and security systems in the framework of the project "Transformation of transmission lines of the Kurzeme loks 110Kv EPL in the Ventspils-Riga section";

Discover how hybrid energy systems, combining solar, wind, and battery storage, are transforming telecom base station power, reducing costs, and boosting sustainability.

The invention relates to a communication base station stand-by power supply system based on an activation-type cell and a wind-solar complementary power supply system.

Solar and wind energy production alone experienced an impressive 92% surge in 2023 compared to 2022, and this momentum shows no signs of slowing down. Building on these achievements, Latvia ...

The wind-solar-diesel hybrid power supply system of the communication base station is composed of a wind turbine, a solar cell module, an integrated controller for hybrid energy ...

On November 1 Latvia's largest wind energy producer Utilitas Wind opened the first utility-scale battery energy storage battery system in Latvia with a total power of 10 MW and capacity of 20 MWh in ...

With wind and solar capacity growing rapidly, the need for flexible storage solutions has never been greater. Let's unpack how collaboration models are shaping this sector.

In order to improve the utilization efficiency of wind and photovoltaic energy resources, this paper designs a set of wind and solar complementary power generation ...

Latvian solar container communication station wind and solar complementary equipment processing

Given Latvia's high share of renewable electricity, the need for electricity storage technologies will increase significantly. However, there are also challenges, such as the need for ...

This large-capacity, modular outdoor base station seamlessly integrates photovoltaic, wind power, and energy storage to provide a stable DC48V power supply and optical distribution.
