Minimize leakage currents in Solar-PV systems with passive filters and fuzzy based voltage source converter

In addition to this, a leakage current reduction between PV source and MLI is attenuated by adding two switches in either side of PV sources, and the PWM strategy is suitably tailored to ...

There are two distinct methods to eliminate the leakage current in the solar PV array system: (i) obstruct the leakage current,(ii) reduce the variation/constant common-mode voltage.

In three-phase transformerless inverters, for systemic reasons, the oscillations are of a much smaller amplitude and, as a result, they generate smaller leakage currents. The pass-through of AC voltage ...

In order to solve these problems, an auxiliary power supply based nine-switch (AP-H9) inverter with reduced leakage current is proposed in this paper.

This paper proposes a transformer-less multi-level solar power generation system. This solar power generation system is composed of a solar cell array, a boost power converter, an ...

As the demand for renewable energy continues to rise, photovoltaic power generation offers a viable solution. This paper focuses on suppressing leakage currents in five-level photovoltaic...

This paper proposes an optimized predictive control strategy to mitigate the potential leakage current of grid-tied photovoltaic (PV) systems to improve the lifespans of PV modules.

But there's good news: we've developed a passive filter that effectively suppresses the leakage current without requiring additional semiconductor switches. We've analyzed the system's frequency-domain ...

There are two distinct methods to eliminate the leakage current in the solar PV array system: (i) obstruct the

leakage current, (ii) reduce the variation/constant common-mode voltage.
