-----

On 27 May 2025, over 200 participants attended the webinar on the "EASE Guidelines on Safety Best Practices for Battery Energy Storage Systems". The Guidelines are designed to support the safe ...

Lithium-ion batteries currently account for 90% of European battery demand (2023) Europe produces 5% of the world's lithium-ion battery raw materials (2023) The EU aims to secure 40% of its ...

Some European countries have thus set energy storage and battery capacity targets, although the production of battery system components in the region was still largely below demand in...

According to the European Environment Agency, renewable energy accounted for 40% of the EU's electricity generation in 2022 by posing a need for energy storage solutions to manage ...

Explore 2025 BESS projects across Europe, from Germany's Na-ion advancements to France and Spain's renewable energy storage initiatives.

Large-scale battery storage facility showing rows of battery containers and power conversion systems. The largest component of utility-scale battery storage costs lies in the battery ...

A resilient and cost-efficient energy system requires both centralised and decentralised flexibility, making the reactivation of residential and commercial storage a priority. This edition of the ...

The Europe residential energy storage lithium-ion battery market is experiencing significant growth driven by increasing adoption of renewable energy sources, rising consumer awareness of ...

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels across different European countries. It is the ...
