What is a microinverter solar inverter?

Microinverters are a type of solar inverter technology installed at each panel. Microinverters offer many benefits, such as rapid shutdown capabilities, flexibility for panel layouts, and panel-level monitoring and diagnostics. Microinverters are typically more expensive than traditional string inverters.

Do solar panels need micro-inverters?

Solar panels get all the glory, but it's the micro-inverters that do all the work, unlike the conventional inverters, micro-inverters provide flexibility and optimization for your photovoltaic system.

What are the different types of solar inverters?

Three common inverter options are microinverters, string inverters, and power optimizers. Here's how microinverters compare: Wiring is the biggest difference between string and microinverters. Depending on the size of your solar panel system, you only need to use one or two string inverters to wire your panels.
