What is a photovoltaic block?

Each block provides a firm base for photovoltaic (PV) panels, featuring tongue and groove interlocks that keep rows aligned and securely connected to create a larger surface area. The modular mould system allows blocks to be manufactured in a wide range of sizes - from 500mm to 1.5m wide, up to 6m long, and 150mm to 280mm thick.

What is a solar ballast block?

When you need a foundation system that combines structural stability with quick installation, solar ballast blocks are the perfect solution. Each block provides a firm base for photovoltaic (PV) panels, featuring tongue and groove interlocks that keep rows aligned and securely connected to create a larger surface area.

How is a ground mounted PV solar panel Foundation designed?

This case study focuses on the design of a ground mounted PV solar panel foundation using the engineering software program spMats. The selected solar panel is known as Top-of-Pole Mount(TPM), where it is designed to install quickly and provide a secure mounting structure for PV modules on a single pole.

How to install a solar power system?

When you install your Solar Power system, try to position your photovoltaic panels directly under the noontime sun for maximum efficiency from your photovoltaic unit. Before Installation, take care of any obstructions to sunlight. Remove all unnecessary obstructions and items such as branches that may block sunlight to your solar unit.
