Does a solar panel make no power?

Video related to this blog post: Solar Panel makes no power! But has Voltage? Another way to describe the problem, is loading the solar panel down produces little to no power. As soon as a load is placed on the panel, the voltage drops significantly, but no power is produced.

Does a solar panel have a good output voltage?

A problem that a DIY solar power enthusiast may someday face is to find a solar panel [or a whole solar panel array] has good output voltage - but does not produce any power when connected to a charge controller. Video related to this blog post: Solar Panel makes no power! But has Voltage?

What happens if a solar panel is not connected?

When a solar panel is not connected, but still it is exposed to solar radiation, it will continue to produce electricity. This extra electricity can lead to overheating and cause the voltage across the panel to be converted into heat. This can potentially lead to a fire hazard if solar panels are not regularly checked and maintained.
