About the Renewable Energy Ready Home Specifications Assumptions of the RERH Solar Photovoltaic Specification Builder and Specification Limitations 1.5 Document the solar resource potential at the designated array location 3.3 Install a conduit for the AC wire run from the designated inverter location to the electric service panel 4.2 Record the name and Web address of the electric utility service provider 5.1 Landscape Plan 5.2 Placement of non-array roof penetrations and structural building elements Appendix A: RERH Labeling Guidance The Renewable Energy Ready Home (RERH) specifications were developed by the U.S. Environmental Protection Agency (EPA) to assist builders in designing and constructing homes equipped with a set of features that make the installation of solar energy systems after the completion of the home's construction easier and less expensive. The specifications... See more on [PDF] Best Practices for Operation and Maintenance of Photovoltaic ... The goal of this guide is to reduce the cost and improve the effectiveness of operations and maintenance (O& M) for photovoltaic (PV) systems and combined PV and energy storage systems.

This Best Practice provides an overview of the system components, maintenance requirements, and reporting requirements to keep solar photovoltaic systems operating safely and efficiently.

To reduce the potential for leaks and to provide a more durable platform under all types of PV systems, the roof manufacturer will specify requirements and recommendations.

The goal of this guide is to reduce the cost and improve the effectiveness of operations and maintenance (O& M) for photovoltaic (PV) systems and combined PV and energy storage systems.

This guide serves as a reference for inspecting, transporting, unpacking, handling and storing LONGi PV solar modules to ensure safe practices for you and the modules.

Wind will add live loads; the magnitude of live loads will depend on the geographic region and the final PV system. It is recommended that the roof has the capacity to support a minimum of 6 pounds ...

All nonresidential buildings with solar PV systems are required to have a battery energy storage system unless they meet an exception. For more on the requirements for battery energy storage systems, ...

This table outlines the necessary frequency for collecting various operational data points and their required archive durations, with requirements varying based on the size of the photovoltaic system.

An engineer's evaluation regarding the dead-load capability of the existing roof structure and its ability to support the added weight of the solar photovoltaic system.

Metallic support structures listed, labeled, and identified for bonding and grounding metal parts of PV systems can be used to bond PV equipment to the metal support structure.

The reinstallation of the PV modules, PV support system (racking) and associated equipment and wiring must comply with the requirements of the currently adopted NEC, including but not limited to all ...
