In this paper, monitoring and controlling of solar panel is executed by Allen Bradley MicroLogix 1400 PLC which is the main controller of system and SCADA.

In this study, firstly, the classification of solar tracking systems used for solar panels to follow the sun is explained. Then, the method of calculating azimuth and elevation angles using ...

This research paper presents the design, implementation, and performance evaluation of a single-axis solar tracking system (SASTS) employing Siemens programmable logic controller (PLC) ...

The objective of this paper is to develop an automatic solar tracking system where solar panels will keep aligned with the Sunlight in order to maximize in harvesting solar power.

A solar tracker is simulated and tested successfully using plc, in that it achieved an overall power collection efficiency increase from the same panel on the tracking device.

In this paper, the tracking process is governed and controlled by programmable logic controller (PLC) where two stepper motors are used to guide the motion of the solar panel in azimuth ...

Overview Solar panel tracking systems optimize energy output of photovoltaic panels by positioning them to follow the sun"s path throughout the day. The sun"s position in the sky varies both with ...

The AC500 PLC uses high-precision solar algorithms to ensure that all type of trackers, for either PV, CPV or CSP, are precisely aligned and follow the movement of the sun with exceptional accuracy.

The target of this project was to establish a solar tracking system with programmable logic controller as its controlling unit. More specifically this project concerned the programming of the linear motors that ...
