Explore global renewable energy usage by country, highlighting the top performers, trends, and opportunities for a sustainable energy future.

Electricity demand is growing around the world but the growth in solar and wind was so strong it met 100% of the extra electricity demand, even helping drive a slight decline in coal and gas ...

The global energy map is changing fast and renewables now supply a significant and rising share of the world's electricity. In 2023 the world crossed an important milestone: renewables generated roughly ...

In this article we look at the data on renewable energy technologies across the world; what share of energy they account for today, and how quickly this is changing.

Renewable energy statistics 2025 provides datasets on power-generation capacity for 2015-2024, actual power generation for 2015-2023 and renewable energy balances for over 150 countries and areas for ...

This interactive map shows the share of primary energy that comes from renewables (the sum of all renewable energy technologies) across the world. The share of energy we get from individual ...

Global investment in and deployment of renewables reached an all-time high in 2023, despite high interest rates and higher costs of raw materials. Globally, renewable energy supplied 30% of ...

In 2030, renewable energy sources are used for 46% of global electricity generation, with wind and solar PV together making up 30%. By 2030, however, solar PV becomes the foremost renewable ...

Clean energy continues to dominate new power capacity. For example, in 2024, more than 90% of all new electricity capacity worldwide came from renewable sources such as solar, wind, ...

We've taken a look at some of the top renewable energy sources -- solar and wind among them -- examining

Renewable energy sources worldwide

the pros, cons and some of the companies using them.
