Renewable energy generation has great potential to reduce greenhouse gas emissions, however, it may exacerbate other environmental impacts, such as water scarcity, elsewhere in the ...

This paper enables researchers to understand the research status, research frontier and future research direction of distributed PV, providing guidance and reference for future in-depth ...

This paper presents a bibliometric study of global research output in SPTs using data retrieved from the Scopus and Web of Science databases for the period between 2015 and 2024.

Explore each of the research areas below and the research topics within them. You can also learn about the basics of solar energy and find solar energy resources.

With this dataset, the researchers constructed a statistical model to explore how increases in hourly solar energy generation would affect CO₂ emissions within a given region and in its ...

This paper aimed to analyse the detection and evaluation of hotspot loss in solar panels during an experiment on 100-watt solar panels on a rooftop. Experiments with and without bypass diodes in ...

NLR conducts solar market research and analysis, gathering datasets and developing tools, to inform the efficient and affordable adoption of solar energy to benefit industries and ...

It examines the current state of solar power and related academic solar energy research in different countries, aiming to provide valuable guidance for researchers, designers, and policymakers ...

This study facilitates a comprehensive understanding of the status and trends in solar power research for researchers, stakeholders, and policy-makers.

Based on this analysis, this study summarizes key research frontiers in PV landscapes, including the impacts and assessment of PV installations on the ecological environment, the deep ...
