Growth in utility-scale and distributed solar PV more than doubles, representing nearly 80% of worldwide renewable electricity capacity expansion. Low module costs, relatively efficient permitting processes ...

KEY FACTS In 2023, global additions to renewable power capacity increased an estimated 36% to reach 473 GW, a new record for the 22nd consecutive year. At the 2023 United Nations Climate ...

Solar PV accounts for almost 80% of the global increase, followed by wind, hydropower, bioenergy and geothermal. In more than 80% of countries worldwide, renewable power capacity is set to grow faster ...

It presents the trends underlying them, and the likely implications for energy sources and power sector emissions in the near future. With the report, Ember is also releasing the first ...

Global Electricity Review 2025 Ember's sixth annual Global Electricity Review provides the first comprehensive overview of changes in global electricity generation in 2024, based on reported data. ...

o At the end of 2024, solar was the second-largest source of U.S. generation capacity, though still a growing percentage of the U.S. electric generation mix. o In 2024, solar represented ...

The association explores the trends identified in the report, noting the milestones, regional dynamics, and the implications of increased PV penetration in energy grids worldwide.

It examines the current state of solar power and related academic solar energy research in different countries, aiming to provide valuable guidance for researchers, designers, and policymakers ...

The IEA PVPS Trends in Photovoltaic Applications 2025 report provides comprehensive data and analysis on global PV deployment, technology, and market evolution from 1992 to 2024.

Research on foreign solar power generation trends

Policymakers in some of the world's largest economies are reducing support for solar power generation. Even so, Goldman Sachs Research expects rapid growth in the sector, with global ...
