Schneider Electric and its California-based power system design subsidiary Etap have developed a physics-based digital twin to help utilities and critical infrastructure operators strengthen ...

Through its integrated electrical digital twin platform, ETAP delivers best-in-class, seamless customer experience and cloud-leveraging technologies ensuring universal accessibility for ...

Schneider Electric, the leader in the digital transformation of energy management and automation, and ETAP, the industry and technology leader in power system design and operation, ...

Schneider Electric and ETAP introduce a physics-based digital twin to connect grid design and operations, enabling predictive insights, resilience, and faster modernization.

Enable the optimized use of renewable resources including solar photovoltaics, fuel cells, natural gas generators, and combined heat and power systems. Helps protect against extreme weather, ...

ETAP and Schneider Electric have jointly introduced what they're calling the world's first digital twin capable of simulating every facet of an AI Factory's power usage, from the grid right down ...

Schneider Electric and ETAP have unveiled a new physics-based digital twin designed to bring engineering-grade power system simulation directly into real-time grid operations.

Schneider Electric, together with ETAP, has introduced a physics-based digital twin designed to bridge planning and operational environments for utilities and operators of critical ...

Integrated with Schneider Electric's One Digital Grid Platform and EcoStruxure(TM) ArcFM Web - an advanced GIS for a complete, location-based view of utility assets - the new physics ...

Engineering-grade simulation and lifecycle continuity to accelerate grid modernization and resilience SAN

Schneider Digital Twin Microgrid

DIEGO, Feb. 3, 2026 /PRNewswire/ -- Schneider Electric, a global energy technology ...
