NASA is one step closer to understanding the solar power challenges and opportunities on the Moon's surface after completing the build and readiness review of the Photovoltaic ...

NASA and DOE are collaborating on the development of a 40 kWe fission surface power system for a demonstration on the moon by late 2020s with extensibility to Mars missions

These ventures have hefty power demands, and while the Moon has resources like hydrogen, oxygen, and even uranium, no single source provides sufficient capacity on its own. The ...

NASA is one step closer to understanding the solar power challenges and opportunities on the Moon's surface after completing the build and readiness review of the Photovoltaic Investigation ...

Spacecraft orbiting the Earth or stationed on the moon are typically powered by solar panels. But for any long-term human occupation of the moon, solar power alone won't be enough...

The European Space Agency (ESA) and Astrostrom, a Switzerland-based company, have proposed a groundbreaking design known as the Greater Earth Lunar Power Station.

Shimizu Corporation's Luna Ring concept could transform global energy by harnessing the Moon's solar power and beaming it back to Earth.

Volta is calling its proposed wireless system LightGrid. They claim it would work by integrating LightPorts (the receivers) into future lunar rovers, landers, and other vehicles. These ...

As humanity sets its sights on establishing a sustainable presence on the Moon, one critical requirement stands out, a reliable and continuous power source.
