What does a microinverter not reporting system status mean?

If you see a Microinverters Not Reporting system status in your Enphase App, it means that some or all of your solar panels are not sending data to the gateway. In the ARRAY screen of your Enphase App, these panels may appear black.

What if a microinverter has not produced power for 5 days?

Error: More than one microinverter has not produced power for five days. Homeowners and installers will receive alerts via text, email, or push based on selected notification preferences when either: More than one microinverter has not produced power for five days. System production drops below the installer-set threshold.

Why are my microinverters not reporting?

The Microinverters Not Reporting status usually points to a disruption in the communication path between your microinverters and the gateway. This can happen due to: The troubleshooting steps differ slightly depending on which type of gateway you have. To know your gateway type, open the Enphase App and go to Menu > System > Devices > Gateway.

How do I know if my Enphase microinverter has been powered off?

In this case, the Enphase Installer Portal displays a Production Issue alert, and the Enphase App displays a Low Solar Production alert. Warning: At least 90% of microinverters have been powered off by the installer. Example: When the system is awaiting Permission to Operate (PTO).
