Depending on the data, this can include standardizing country names and world region definitions, converting units, calculating derived indicators such ...

Chart: Which 10 countries generated the most solar power in 2023? China was the top solar power producer last year, but it's not the only nation that saw a big leap in solar production.

This dashboard ranks countries/areas to their renewable energy power capacity or electricity generation. The data can be further refined based on region, technology or year of interest.

Our rundown of the countries around the world using the most solar energy, from Mexico to China

Depending on the data, this can include standardizing country names and world region definitions, converting units, calculating derived indicators such as per capita measures, as well as adding or adapting ...

This ranking tracks the share of electricity generated from renewable sources (hydro, wind, solar, bioenergy and other renewables) as a percentage of a country's total electricity generation.

In this article, with the help of charts and key statistical data, we reveal the latest solar power statistics that demonstrate how the industry has grown so far, and the outlook and potential for the future.

Solar energy capacity is growing rapidly, driving the global transition to renewable energy. This graphic visualizes the top 15 countries by cumulative megawatts of installed photovoltaic (PV) and ...

The Global Solar Atlas provides a summary of solar power potential and solar resources globally.

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.

## Solar power generation ranking chart

The average for 2022 based on 189 countries was 5.64 million kilowatts. The highest value was in China: 393.03 million kilowatts and the lowest value was in Bermuda: 0 million kilowatts. The indicator is available from ...
