Solar grazing is the practice of using sheep to manage vegetation on solar farms. Panels need grassland beneath them. On a typical site, that means tens of acres of grass that needs mowing or...

Solar grazing is an innovative practice gaining momentum across the United States, where sheep graze beneath and around solar panels on solar farms. This dual-use approach not only supports clean ...

"Solar grazing allows us to keep the site operating efficiently while supporting local farmers and reducing our environmental footprint. By partnering with sheep farmers and advancing ...

Today's solar companies are turning to flocks of sheep to trim grass and control weeds under solar panels. These eco-friendly grazers easily navigate narrow panel rows, cutting ...

Western professor Joshua Pearce collaborated with professional shepherd Rafael Lara on a study that shows the profitability of "solar" sheep, raised specifically to trim grass and weeds under traditional solar ...

Company president Arlo Hark stood beside the animals as he explained how his team uses sheep to manage vegetation at solar projects across the western and central United States.

Learn how solar grazing with sheep is revolutionizing vegetation management at solar farms while preserving agricultural land.

On September 15, 2023, sheep began weeding at the Pacifico Energy Furukawa Mega Solar Power Plant in Osaki City, Miyagi Prefecture. This time, with the cooperation of a company that fattens ...

Solar shepherds, who manage sheep grazing under solar panels, are part of a growing movement that combines agriculture and renewable energy -- and offers high incomes in the process.
