A new notion of wind turbine without blades called vortex bladeless wind turbine is developed. A new dimensional paradigm in wind energy is represented in this design and it helps to ...

An energy startup company called Vortex Bladeless has come up with a wind turbine design that doesn't incorporate blades and it's like nothing we've ever seen before.

Unlike their bladed counterparts, bladeless wind turbines don't have the familiar spinning rotors. Instead, they have a tall, thin profile and oscillate in response to wind patterns. Bladeless wind ...

The Vortex Bladeless wind turbine recently covered here on CleanTechnica and many other sites is, unfortunately, yet another example of an impractical, uncompetitive wind turbine that is...

Eco-friendly bladeless small wind energy. Startup technology Vortex wind power for on-site generation, the low-cost wind turbine which is not a turbine!

Vortex Bladeless is attempting to produce a wind turbine that isn't actually a turbine. All generators require a magnetic field, a conductor and motion to produce electricity.

The turbines in "Vortex Bladeless Turbines" is actually a misnomer because vortex bladeless doesn't rotate, but for simplicity they are called bladeless turbines.

Still a Work in Progress Vortex Bladeless has spent years developing and testing this technology. The idea dates back at least to 2015, but it has taken time to refine. Critics have voiced ...

If I were, I'd want to get rid of these ground-anchored tall pole-like structures that seem to appear and grow on my property all by themselves, and that are constantly vortex-shedding and ...

We'll be watching the results of Vortex Bladeless" testing -- or as much of those results as the company makes

Vortex bladeless doesn't work

available. But the history of renewable energy is littered with ideas that sounded ...
