Find up-to-date statistics and facts on the global wind power market.

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this ...

The world's installed wind power capacity now meets well over 10% of global electricity demand - and much more than nuclear power. More than 30 countries now have a share of wind ...

The market share of turbines with power rating greater than 5000 kW was 63 per cent in 2024, 7.3 per cent higher than 2023, primarily due to larger onshore turbines were installed in China and more ...

The Wind Power is a comprehensive database of detailed raw statistics on the rapidly growing sphere of wind energy and its supporting markets.

The Master Data Register of Wind Turbines is a national database which contains all Danish power producing wind turbines > 6 kW. The Register has information on location, technical specifications ...

Data on renewable power capacity represents the maximum net generating capacity of power plants and other installations that use renewable energy sources to produce electricity.

The Global Wind Power Tracker (GWPT) is a worldwide dataset of utility-scale, on and offshore wind facilities. It includes wind farm phases with capacities of 10 megawatts (MW) or more.

Wind power is one of the cleanest and most sustainable sources of energy available to us right now. It is an infinite resource that will never run out, and which produces zero emissions ...

Solar PV and wind account for 96% of all renewable capacity additions through 2030 because they are the

What is the A-share wind power generation index

most affordable options to add new capacity in almost every country in the ...
