A new analysis indicates that Theia likely formed in the same region of the solar system as Earth, making the two worlds early neighbours.

Scientists say they've finally found remnants of Theia, an ancient planet that collided with Earth to form the moon

Some scientists say a growing number of clues point to the existence of a hidden planet in the Kuiper Belt beyond Neptune -- and they may soon have the opportunity to find proof.

President Donald Trump told Senate Minority Leader Chuck Schumer last month that he was finally prepared to drop his freeze on billions of dollars in funding for a major New York ...

Venezuela's acting president Delcy Rodr#237;guez said Sunday she has had "enough" of Washington's orders, as she works to unite the country after the US capture of its former leader ...

Well hidden deep inside the Earth, beneath both Africa and the Pacific Ocean, lie enormous globs known as large low-velocity provinces, or LLVPs. These ...

Now, scientists have finally solved the mystery. These blobs are actually the remains of an ancient planet that

Where is planet theia today

crashed into Earth during the same impact that created the moon. The findings are...

Outrage is growing in Italy over the deployment of Immigration and Customs Enforcement (ICE) agents to assist US security operations at the Winter Olympics next month.

According to this hypothesis, Mars-sized Theia collided with Earth about 4.5 billion years ago, and a large chunk of Theia and/or possibly Earth broke off and became the Moon we know today.

Direct evidence of its existence has remained elusive. No leftover fragments from the planet have been found in the solar system. And many ...

By observing the anomalies in the Earth's mantle and comparing them to matter surrounding them, the researchers suggested that they may be buried remnants of Theia mantle ...

Anthropic's Cowork AI assistant sent shockwaves through Wall Street this week over concerns it could replace specialized software packages, such as for legal or financial analysis. Now ...

New research suggests that large remnants of Theia, a Mars-sized object that collided with Earth to form the Moon, still exist within Earth's mantle. ...
