How much solar power did China install in the first quarter?

For more information, visit [China installed a record 60 gigawatts \(GW\) of new solar photovoltaic \(PV\) capacity in the first quarter of 2025 - the highest ever recorded in a first quarter in the country's history, according to Rystad Energy research and analysis.](#)

Why has rooftop PV soared in China?

Rooftop PV accounted for 60%, or 36 GW, of that total, marking the largest quarterly capacity addition for distributed PV in China's history. The surge was largely driven by the urgency to meet policy deadlines set by the National Energy Administration's (NEA) new guidelines, which were released in October last year and put into effect this May.

When will China's solar PV capacity grow?

Looking ahead, steady growth in China's annual solar PV capacity is expected until 2030.

Will China install 220 gigawatts in 2024?

New utility-scale capacity more than tripled in 2023 as developers rushed to meet the deadline for the first phase of Xi's plan, while rooftop growth nearly doubled. The China Photovoltaic Industry Association expects the country to install as many as 220 gigawatts in 2024.

China installed a record 60 gigawatts (GW) of new solar photovoltaic (PV) capacity in the first quarter of 2025 - the highest ever recorded in a first quarter in the country's history, according to ...

4MW Rooftop Distributed Power Station in Fengxian District, Shanghai - Global Project References - PV Solar products Manufacturer, Solar Panel Suppliers India - JaSolar

The continent imported 60% more solar panels from China over the past year, though a lack of reliable installation data makes it a challenge to track the true pace of deployment.

The claim that China installed 93 GW of solar in May and that this equates to nearly 100 panels every second is supported by multiple credible sources. The NEA's official data confirms the ...

Explore top solar panel manufacturers in China, production centers, and decisions on sourcing the best solar

Yitao installs photovoltaic solar panels

China sets a new solar installation record, leading the world in renewable energy. Explore the groundbreaking achievements and future potential!

Solar installations surged to a record of about 216 gigawatts last year -- more than all the panels installed in the US -- thanks to falling module prices. New utility-scale capacity more than ...

China is on track to set a new record for photovoltaic solar power installations in 2024, driven by falling production costs and increased global interest in renewable energy, said industry ...

China installed a record 60 GW of new PV capacity in the first quarter of 2025, driven by a surge in rooftop deployment ahead of updated grid-access rules, says Rystad Energy. It predicts ...

The Yibin ART T1 Line in Sichuan Province has become the world's first rail transit system to achieve carbon-neutral operations certified by the internationally recognized PAS 2060 ...
