Is a PV/T-GSHP-PCM a sustainable heating system?

To address this challenge and develop a more energy-efficient, economical, and sustainable heating system, this paper proposes a novel PV/T-GSHP-PCM (photovoltaic/thermal-ground source heat pump-phase change material) system. A simulation model of the system was developed, and its performance was thoroughly analyzed.

What is the annual energy consumption of PV/T-GSHP-PCM system?

Annual energy consumption of the PV/T-GSHP-PCM system is 9007 kWh, while the annual system capacity is 9184 kWh. The system has an annual generation capacity that meets energy consumption and generates an extra 177 kWh of electricity, resulting in zero-energy operation of the system for the entire year.

Why is PV/T-GSHP-PCM energy consumption lower than GSHP?

The energy consumption of the PV/T-GSHP-PCM system is lower than that of the GSHP system due to the fact that the temperature is higher when PV/T is utilized as the heat source and the heat recovery is done at the heating end using PCM.

What is PV/T-GSHP-PCM?

After simulation modeling of the PV/T-GSHP-PCM (photovoltaic/thermal-ground source heat pump-phase change material) system, the building heating performance, heat utilization efficiency, economy, environmental friendliness and sustainability aspects of the system are analyzed.

Yuhua Agritech Solar Living Lab trials new method that generates power while growing vegetables to help operators increase source of income

Since 2004, Yuhui has been dedicated to the customized production of solar photovoltaic power generation, providing sustainable solar energy, solar photovoltaic module, solar photovoltaic power ...

Renewable energy HVAC systems, such as solar systems, ground source heat pump systems and air source heat pump systems, are now widely used. Each of which has its own ...

8MW Water-Solar Hybrid Generation PV Power Plant in Yushu County, of Qinghai Yuneng Power

Development Co., Ltd.

The installed capacity of non-fossil energy power generation ranked first in the world, with the installed capacity of wind and solar power generation reaching 280 GW(kW) and 250 GW respectively ...

This project involves installing photovoltaic panels on the roofs of the Yuhua electric-fusion semi-finished product workshop, the cutting and grinding processing workshop, and the ...

About Yuhua Solar Power Generation and Heating As the photovoltaic (PV) industry continues to evolve, advancements in Yuhua Solar Power Generation and Heating have become critical to ...

The paper makes an analysis of the heating load of solar energy in buildings in Yushu district with De ST software. The results show that the modified architecture has remarkable energy saving ...

The combination of a solar heat pipe collector with thermoelectric modules could provide a very useful device for simultaneous power generation and hot water heating. Recent developments in solar ...

Haining YuHua solar water heater Factory is a modern enterprise with many years of manufacturing solar water heater. It is a professional manufacturer of solar water heater with big scale which ...
