-----

In 2024, the province achieved a 100 percent utilization rate for both energy storage and solar power, while total clean electricity consumption reached 213.6 billion kilowatt-hours -- a 16.5 percent ...

Zhejiang is also pushing technical boundaries in varied terrains. Offshore wind power is scaling up in coastal Zhoushan city, while mountainous cities like Lishui are expanding pumped ...

Zhejiang's total installed power generation capacity stood at roughly 184.15 million kW by the end of the year, with clean energy accounting for 63.6 percent. From 2020 to 2025, clean power ...

On April 15, Zhejiang's solar power generation peaked at 34.36 GW, covering 39.2% of the province's maximum electricity demand that day--a record level. The expansion is underpinned ...

With China aiming to hit peak carbon emissions by 2030, Zhejiang Energy Solar Power Generation Company has become the province's renewable energy linchpin. In Q2 2023 alone, they've added ...

Policy-driven expansion is boosting this rapid growth. Zhejiang's renewable capacity now stands at 59.08 million kilowatts, nearly 40 percent of the province's energy mix. Solar leads with ...

Driven by rapid growth in wind and solar power, clean energy now accounts for 40 percent of Zhejiang's total installed capacity and supplies roughly 45 percent of provincial electricity demand during spring ...

East China's Zhejiang Province saw a new energy development boom in 2023, as part of the country's commitment to delivering on its dual carbon promises.

For the first time in history, renewable energy capacity surpassed coal, accounting for over 50 percent of total generation -- a 31.5 percentage point rise. Photovoltaic power has now ...

In recent years, the coastal province has beefed up green energy development. By the end of 2023, its installed
